

THARINDU JAYASANKHA

SOFTWARE ENGINEER

PROFILE SUMMARY

Experienced Software Engineer skilled in full-stack development with expertise in React.js, ASP.NET Core, and Kubernetes. Proven ability to design scalable, high-performance software solutions, collaborate effectively in agile, cross-functional teams, and align technology with business objectives.

CAREER EXPERIENCE

Software Engineer (2024 - Present)

Millennium IT ESP

- Developed and migrated authentication and authorization systems from Role-Based Access Control (RBAC) to Attribute-Based Access Control (ABAC).
- Integrated and configured ASP.NET Identity Server 4 for secure token management and authentication.
- Deployed and managed containerized microservices with Docker and Kubernetes, ensuring scalability, reliability, and high availability.
- Designed, optimized, and maintained relational (SQL Server, PostgreSQL) and non-relational (MongoDB) databases.
- Utilized Azure cloud services for streamlined application deployment, monitoring, and maintenance.
- Managed inter-service communication through RabbitMQ and implemented caching and session management using Redis.
- Developed Python-based solutions for automated image validation to improve accuracy and reliability in data processing workflows.
- Built and optimized chatbot solutions with Retrieval-Augmented Generation (RAG) pipelines, leveraging Python, LangChain, vector databases, and Node.js.
- Led research and development initiatives on cloud-native AI solutions using Azure Cognitive Services and multiple Large Language Models (LLMs), with a focus on real-time Speech-to-Text processing and advanced speaker diarization.

Associate Software Engineer (2023 -2024)

Millennium IT ESP

- Built responsive and scalable front-end applications using React.js, TypeScript, and Nx Workspace within a micro frontend architecture.
- Developed modern UI components with Tailwind CSS and Ant Design, ensuring cross-device responsiveness and accessibility.
- Developed RESTful Web APIs with ASP.NET Core, utilizing Entity Framework Core and LINQ for efficient data querying and business logic implementation.

TECHNICAL SKILLS

Languages:

- C#
- TypeScript
- JavaScript,
- Python
- R

Backend Development:

- ASP.NET Core (Web API, Identity),
- Entity Framework Core,
- Node js,
- GraphQL

Frontend Development:

- React js,
- Tailwind css,
- Ant Design,
- Nx Workspace (Micro Frontend Architecture)

Cloud & DevOps:

- Docker,
- Kubernetes,
- Azure, Azure DevOps,
- CI/CD Pipelines,

Databases, Caching & Messaging:

- PostgreSQL
- MongoDB,
- RabbitMQ,
- Redis

AI/ML & Tools:

- TensorFlow,
- PyTorch,
- Hugging Face Transformers,
- scikit-learn,
- LangChain,
- RAG pipelines,
- Azure Cognitive Services,

Parsing & Language Tooling:

- Nearley.js,
- Moo,
- Domain Specific Language (DSL) Parsing

- Integrated GraphQL APIs to optimize client-server communication in enterprise applications.
- Implemented advanced tokenizer systems and modular rule engines using Nearley.js and Moo in Node.js, capable of parsing complex domain-specific languages (DSLs) and validating high-volume data streams with low latency.

Intern Software Engineer (2022 -2023)
Millennium IT ESP

- Contributed to the development of a React.js-based spreadsheet-style calculation and reporting system, implementing features such as dynamic formulas, data validation, and custom report generation.
- Applied unit testing and integration testing to ensure software reliability and maintainability.
- Gained hands-on experience with version control (Git), Azure DevOps pipelines, and agile practices such as daily stand-ups, sprint planning, and reviews under Scrum methodology.

EDUCATIONAL QUALIFICATIONS

Master of Science in Artificial Intelligence (Reading)
University of Moratuwa

Bachelor of Science (Honors) in Computer Science (2020 - 2024)
Informatics Institute of Technology

GCE Advanced Level (2018)
Kalutara Vidyalaya National School

RESEARCH AREA

Vision Transformers in Computer Vision

Developed and implemented Vision Transformer (ViT) models for image classification tasks, exploring the use of transformer architectures in computer vision. Focused on leveraging self-attention mechanisms to capture global image features, improving model performance on large-scale datasets compared to traditional CNNs. Enhanced model accuracy through fine-tuning, data augmentation, and hyperparameter optimization, contributing to advancements in the application of transformers in visual recognition tasks.
